18 January 1963

MEMORANDUM FOR: Assistant for Operations, NPIC

THROUGH: Chief, Technical Intelligence Division, NPIC

SUBJECT: Cursory Evaluation of Missions 3365 and 3366

1. A cursory evaluation of Missions 3365 and 3366 has been made by TSB. As a result of this examination, it was determined that the large-scale photography of both missions was degraded by camera vacuum failure. Mission 3365 was effected throughout, whereas failure began occurring at frame 399 on Mission 3366, and continued to the last frame.

2. Generally, degradation was of such an extent that it precluded maximum interpretation of this material.

3. It is strongly suggested that those persons responsible for the mechanical performance of these cameras be notified immediately.
